On Topological Methods in the Theory of
Functions of a Complex Variable

S/020/60/131/05/07/069

Theorem 1: Let I be the boundary index of $u(x,y) = \operatorname{Re} f(z)$ on the contour Γ with respect to G . Then it holds

$$(3) \quad \sum_{k=1}^m (i-p_k) = 2 - \alpha + I,$$

where m is the number of singularities in G described above.

The relation (3) exists also when the above singularities lie on the boundary Γ if the definition of I is suitably modified (theorem 2).

The author mentions F.D.Gakhov, Yu.M.Krikunov and T.A.Kolomiytseva.

There are 3 references: 2 Soviet and 1 American.

TITLE: Branching Point Indices of a Many-Valued Function 16

PERIODICAL: Doklady Akademii nauk SSSR, 1960, Vol. 134, No. 3,

pp. 521-524

TEXT: Let the domain G be bounded by the Jordan curves
 $(\Gamma_1, \Gamma_2, \dots, \Gamma_\alpha) = \Gamma$. Assume that in the neighborhood of an
interior point a of G a function $f(z)$ has the representation

$$(1) f(z) = \sum_{j=1}^m g_j(z)(z-a)^{q_j} + (z-a)^n \psi(z) + c \quad \text{or}$$

$$(3) f(z) = g(z)(z-a)^s \ln^q(z-a) + (z-a)^n \psi(z) + c \quad \text{or}$$

$$(4) f(z) = \psi(z) \ln^q(z-a) + g(z)(z-a)^s + c,$$

where g_j , s are real, not integer; n , q are integer; $g_j(z)$, $g(z)$
and $\psi(z)$ are analytic in G and different from zero and satisfy
some further restrictions.

Assume that the function $f(z)$ has m critical points a_j in G and in

Branching Point Indices of a Many-Valued Function

their neighborhoods one of the representations (1), (3), (4). Let the function $n(x,y) = \operatorname{Re} f(z)$ be harmonic in the domain G cut open along $L_j (t = x+i\beta_j, x \leq \alpha_j, \alpha_j = \alpha_j + i\beta_j)$, continuous in \bar{G} (eventually except the points a_j). Let $u(x,y)$ satisfy on Γ one of the boundary conditions A, B, C of (Ref. 1).

Theorem: Let I be the boundary index of $u(x,y)$ on Γ relative to G . Then it is

$$(5) \quad \sum_{j=1}^m I(a_j) = 2 - \alpha + I,$$

where $I(a_j)$ is the index of the point a_j of the function $u(x,y)$. The proof is based on three lemmata¹⁴ in which for the cases (1), (3), (4) the growth of the boundary index of $u(x,y)$ on $\gamma_0 (|z-a| = r_0)$ relative to $|z - a| > r_0$ is calculated.

AUTHOR: Mel'nik, L. M.

TITLE: On Hilbert's boundary value problem

PERIODICAL: Akademiya nauk SSSR. Doklady, v. 138, no. 3, 1961,
537-540

TEXT: Let the domain D be bounded by a simple smooth curve L; let $a(t)$, $b(t)$, $c(t)$ be real functions on L which satisfy the Hölder condition, where $a(t)$, $b(t)$ are not identically equal to zero on L. Assume that the function $\alpha(t)$ maps L into itself homeomorphically and under conservation of the sense of circulation; $\alpha'(t)$ is assumed to satisfy the Hölder condition and to be $\neq 0$ on L. Let

$$\alpha[\alpha(t)] = t, \quad a(t) a [\alpha(t)] = b(t) b [\alpha(t)]. \quad (1)$$

Determine a function $f(z) = u(z) + iv(z)$ analytic in D, continuously continuable on L, the real and imaginary part is required to satisfy the boundary condition. X

$$a(t) u [\alpha(t)] + b(t) v(t) = c(t) \text{ on } L \quad (2)$$

Card 1/7

24035
S/020/61/138/005/007/017
C111/C333

On Hilbert's boundary value problem

Let the finite domain bounded by L be D^+ , the infinite domain -- D^- .
Let the sense of rotation on L be positive relative to D^+ . If $D \subset D^+$,
then the problem formulated above is called the interior problem,
for $D \supset D^+$ it is called the exterior problem.

In the case $D = D^+$ the problem is reduced to the equivalent problem

$$f^+ [\underline{\omega}(t)] = G(t) \overline{f^+(t)} + g(t) \quad \text{on } L \quad (3)$$

where

$$G(t) = \frac{b(t)}{ia(t)}, \quad g(t) = \frac{c(t)b[\underline{\omega}(t)] + ia(t)c[\underline{\omega}(t)]}{a(t)b[\underline{\omega}(t)]} \quad (4)$$

At first the author considers the special case, where (3) has the form

$$f^+ [\underline{\omega}(t)] = \overline{f^+(t)} + g(t) \quad . \quad (5)$$

The solution of (5) is sought in the form

Card 2/4

24035
S/020/61/138/003/007/017
C111/C333

On Hilbert's boundary value problem

$$f(z) = \frac{1}{2\pi i} \int_L \frac{\varphi[\alpha(\tau)]}{\tau - z} d\tau \quad (6)$$

which for $\varphi(t)$ leads to the Fredholm equation

$$K\varphi \equiv \varphi(t) + \frac{1}{2\pi i} \int_L \left(\frac{\alpha'(\tau)}{\alpha(\tau) - \alpha(t)} - \frac{1}{\tau - t} + \frac{2i}{\tau'} \frac{\cos(r,n)}{r} \right) \varphi(\tau) d\tau = g(t)$$

where $r = |\tau - t|$, n -- interior normal of L in the point τ ; (r,n) the angle between $\tau - t$ and n ; $\tau' = d\tau/ds$, s -- arc.

Finally, the author states that the general solution of (3) or (2) is given by

$$f(z) = \left\{ A + \frac{1}{2\pi i} \int_L \frac{\Psi[\alpha(\tau)]}{\tau - z} d\tau \right\} e^{\Gamma(z)} \quad (8)$$

Card 3/7

TITLE: Singular integrofunctional equation

SOURCE: IVUZ. Matematika, no. 2, 1964, 100-109

TOPIC TAGS: integrofunctional equation, complex function, Holder condition, infinitely distant point, Carleman problem

ABSTRACT: Let $a(x)$, $b(x)$, $c(x)$, $d(x)$ and $f(x)$ be complex functions of the real variable x satisfying a Holder condition for all values of x , including an infinitely distant point. The author considers the integro-functional equation

$$\begin{aligned} K\varphi = & a(x)\varphi(x) + b(x)\varphi(-x) + \frac{c(x)}{\pi} \int_{-\infty}^{\infty} \frac{\varphi(t)}{t-x} dt + \\ & + \frac{d(x)}{\pi} \int_{x+\infty}^{\infty} \frac{\varphi(t)}{t-x} dt = f(x). \end{aligned}$$

Card 1/2

ACCESSION NR: APL033969

The solution $\Phi(x)$ of (1) is sought in the class of functions satisfying a Hölder condition. The original problem is converted into an exterior and an interior Carleman problem. The author obtains conditions for the solution of the interior problem and shows that the exterior problem is solvable. He specializes to a more particular case of the Carleman problem and under these conditions obtains a solution in terms of a Cauchy type integral. He then reconsiders the original problem and gives conditions under which it is solvable. Orig. art. has: 56 formulas.

954. THE ANTISEPTIC PROPERTIES OF COMMON PLASTER OF PARIS
(Russian text) - Melnik L. A. - NOV. KHIR. ARKH. 1956, 5 (45-49)

The effect of common plaster of paris on the course of experimental gas gangrene and poisoning by botulin toxin was investigated in guinea-pigs. The experimental animals were infected with *B. perfringens* strain 70, a culture of which was mixed with plaster of paris. For purposes of comparison, a second group of animals was injected with *B. perfringens* mixed with chalk. In addition, experiments were done in which botulin toxin was injected. Common plaster of paris protected a proportion of the animals from death. The results of the experiments with botulin toxin showed that plaster of paris, being a good absorbent, inhibits and prevents botulin

TITLE: The Treatment of Patients Suffering From Burns With Ordinary Gypsum (Lecheniye bol'nykh s ozhogami oby-chnym gipsom)

PERIODICAL: Voyenno-meditsinskiy zhurnal, 1958, Nr 1, pp 78 - 79 (USSR)

ABSTRACT: Following a brief historical survey, the author reports on his experiences in treating burns with ordinary gypsum. Experiments were performed by many physicians, including A.V. Kaplan, P.P. Mitrofanov, Yu.Yu. Dzhanelidze, Z.P. Samsonova, V.V. Gorinevskaya, P.P. Mitrofanov, V.I. Gin'kovskiy, G.I. Turner, Professor S.M. Minervin, P.A. Nalivkin, V.V. Babuk and A.N. Puzanova. Clinical observations of the gypsum empasma effect were made at the Khirurgicheskaya klinika Odesskogo instituta usovershenstovaniya vrachey (Surgical Clinic of the Odessa Ad-

Card 1/2

SOV/177-58-1-19/25

The Treatment of Patients Suffering From Burns With Ordinary Gypsum

vanced Training Institute for Physicians). From the data gathered, the author concludes that ordinary gypsum is an excellent physical antiseptic and may successfully be used in the overall treatment of burns. Gypsum treatment can only be started when the patient has overcome shock and after primary surgical treatment of the burnt surface. Gypsum, used as an empasma, quickly relieves pain, prevents plasmorrhesis and mephitis and sharply reduces toxemia. It protects the burnt surface from secondary infection and thus helps heal the wound.

AUTHOR: Mel'nik, L.A.

TITLE: The use of circular sutures on blood vessels and nerves in cases of thermal burns and radiation sickness

PERIODICAL: Meditsinskaya Radiologiya, v. 8, no. 3, 1963, 43-49

TEXT: To investigate the possibility of operative intervention on blood vessels and nerve trunks damaged by burns against a background of radiation sickness, which is a frequent combination of damage in victims of nuclear explosions, the author exposed 40 dogs weighing between 16 and 25 kg to total body radiation in a dose of 400 r spread over a period of exposure of 38 min. A PYM-11 (RUM-11) apparatus was used. At various stages of the subsequent radiation sickness experimental burns were produced under thiopentone narcosis. The anterior surface of the necks and the inner surface of the thighs were used over a total area of 180-200 cm². In the control group which consisted of 10 dogs, similar burns were pro-

Card 1/2

The use of circular sutures ...

S/241/63/008/003/001/003
D296/D307

duced without preliminary exposure to radiation. The operative intervention on the damaged blood vessels and nerves was also carried out at various stages of the radiation sickness. Ruptured blood vessels were joined by circular sutures by the method of Khénin (Raneniya krovenosnykh sosudov (Blood Vessel Injuries), Ros-tov-na-Donu, 1947) of Carrell, and by the invagination technique. Nerves were repaired by lateral and by circular sutures. The results seemed to depend on the stage of the radiation sickness at which the operation was carried out. The best results were obtained with circular blood vessel sutures made in the initial period and in the recovery period. At the height of the radiation sickness sutures led to thrombus formation and suppuration. Lateral sutures of the nerves did not lead to functional disorders but circular nerve sutures led to temporary motor and sensory disorders in the extremities concerned. There are 3 tables.

AUTHOR: Mel'nik, L. A.

TITLE: Determination of Gases in Steel by the Vacuum Fusion Method
(Opredeleniye gazov v stali metodom vakuum-plavleniya)

PERIODICAL: V sb.: Materialy nauchno-tekhn. konferentsii rabotnikov
zavodsk. laboratori. Rostov-na-Donu, 1957, pp 149-155

ABSTRACT: Essentially the method involves the process of melting a sample of metal in a degasified furnace with an excess of C. The gases evolved in the process are drawn off, collected, and analyzed. An installation used at the Metallurgy Institute of the Academy of Sciences of the USSR for the determination of O₂ and H₂ in steels is described, together with procedures of preparing steel to be analyzed and the procedure of the analysis itself. Data obtained under various conditions from studies on gas saturation of steels are presented. Steel 25L with low gas saturation contains 0.0028 percent O and 15-5 cc of H per 100 g of metal.

TITLE: Polarographic control of the individual stages of the synthesis of some monomers

PERIODICAL: Zhurnal analiticheskoy khimii, v.18, no.3, 1963, 385-395

TEXT: A study was made of the polarographic behavior of 4-acetyl-diphenyl and its chloro-, fluoro-, hydroxy- and methoxy-4' derivatives as well as β -acetyl-tetralin (which are intermediate products in the synthesis of 4-vinyldiphenyl), its derivatives and β -vinyl-tetralin. A method was also developed of the polarographic determination of these compounds in reaction mixtures after acetylation, after reduction of acetyl-derivatives into corresponding carbinols and in industrial products. The method was checked on synthetic mixtures containing various proportions of the substances under examination with satisfactory results. Similarly, polarographic behavior of 4-diphenylaldehyde and 4-phenylcinnamic acid (intermediates in the synthesis of 4-vinyl-diphenyl) and 4-nitrodiphenyl (intermediate in the synthesis of

Card 1/2

Polarographic control ...

S/075/63/018/003/004/006

halogen containing monomers of the vinylidiphenyl series) was studied. Methods of quantitative determination of these compounds in the reaction mixture were developed. All the methods were successfully used for the control of the synthesis of 4-vinyl-diphenyl and β -vinyltetralin and their derivatives. There are 6 figures and 10 tables.

AUTHORS: Pines, B.Ya., Sirenko, A.F., Mel'nik, L.G. SOV/57-28-10-36/40

TITLE: On the Resolving Power of the So-Called High-Dispersion X-Ray Photography (O razreshayushchey sposobnosti tak nazyvayemogo vysokodispersionnogo rentgenografirovaniya)

PERIODICAL: Zhurnal tekhnicheskoy fiziki, Vol 28, Nr 10, pp 2344-2347 (USSR)

ABSTRACT: This is a comparison of the resolving power of a reversal photograph as dependent upon the distance between the film and the sample. It was found that no increase in the resolving power of X-ray photographs is achieved even if the distance between film and sample is varied between 90 - 750 mm. An increase of D exceeding 100 to 150 mm is proved not to be expedient. This is due to the circumstance that when the resolving power of the photograph at great D is maintained, the negative influence of X-ray dispersion in air becomes more pronounced (leading to an increase of background in the X-ray photographs, and in a longer exposure of the photographs). There are 3 figures, 1 table, and 6 references, 6 of which are Soviet.

Abstract : Plankton were studied of the Lyutsimer and Chernoye Lakes, which are located near Shatsk (Volynskaya Oblast'). Morphological and hydrochemical characteristics of the lakes are presented. The specific composition of the zooplankton, and partially of the phytoplankton, were investigated, as well as the quantitative relationship of the different groups of algae
